

VANDANA CHARABUDLA

Tampa, FL, +1 (813) 898-4739 • vandanacharabudla21@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with 4+ years of experience delivering enterprise data integration, data warehousing, and ETL solutions across the complete development lifecycle. Experienced in data analysis, profiling, source-to-target mapping, and data quality management, with strong expertise in SQL, Teradata, Informatica, and data governance practices. Proven track record of designing scalable data pipelines, validating complex datasets, and supporting business-critical reporting and analytics initiatives. Adept at collaborating with business users, data architects, and technology teams to ensure accurate data sourcing, transformation, and delivery. Strong understanding of enterprise data management principles, documentation standards, and regulatory requirements, with the ability to manage multiple priorities in highly collaborative environments.

TECHNICAL SKILLS

Programming & Query Languages: SQL (Advanced), Python, Shell Scripting

Data Engineering & ETL: Informatica PowerCenter, ETL/ELT Development, Data Integration, Data Transformation, Data Validation, Data Migration, Data Profiling, Data Cleansing

Database Technologies: Teradata, Oracle, PostgreSQL, SQL Server, MySQL

Data Warehousing & Analytics: Data Warehousing, Dimensional Modeling, Star Schema, Snowflake Schema, Data Marts, Source-to-Target Mapping (STM), Data Lineage

Data Governance & Quality: Data Governance, Data Management, Metadata Management, Data Quality Assessment, Data Reconciliation, Data Stewardship, Master Data Management (MDM)

Data Analysis & Documentation: Data Analysis, Data Profiling, Data Mapping, Business Requirements Analysis, Functional Specifications, Technical Documentation, Source-to-Target Mapping Documentation

Scheduling & Workflow Management: CA7 Job Scheduler, Control-M, Autosys, Cron Jobs

Development & Project Tools: Jira, Agile, Scrum, SDLC, Waterfall, Git, Bitbucket

Testing & Validation: Unit Testing, System Testing, Integration Testing, UAT Support, Data Validation, Defect Resolution

Banking & Financial Data: Banking Data Processing, Customer Data, Transaction Data, Regulatory Reporting, Risk & Compliance Data Management

EXPERIENCE

Optum - USA

Aug 2024 – Present

Data Engineer

- Performed extensive data analysis and profiling on healthcare and operational datasets containing over 20M+ records, improving data accuracy and completeness by 30%.
- Gathered business requirements and collaborated with stakeholders to design end-to-end data solutions, supporting 15+ enterprise data integration initiatives across multiple business domains.
- Created and maintained 120+ Source-to-Target Mapping (STM) documents, ensuring accurate data transformation and reducing mapping-related defects by 35%.
- Designed data models and mapping specifications for complex ETL processes, improving data consistency and reducing downstream reporting issues by 25%.
- Developed and optimized ETL workflows using Informatica PowerCenter, processing over 5M+ records daily while achieving 99.8% job success rates.
- Wrote advanced Teradata SQL queries, views, stored procedures, and performance-tuning scripts, reducing data retrieval time by 40% and improving report performance.
- Supported the complete SDLC lifecycle, including intake, analysis, design, development, testing, deployment, and post-production support, delivering 20+ successful releases.
- Implemented data quality checks, reconciliation processes, and validation rules that improved data integrity by 28% and reduced production data issues by 32%.

- Partnered with data governance teams to establish data standards, metadata management practices, and lineage documentation, increasing compliance readiness by 22%.
- Designed and enhanced enterprise data warehouse solutions supporting analytics and reporting for over 500+ business users, improving reporting efficiency by 45%.
- Managed and monitored batch processing jobs using CA7 scheduling tools, achieving 99.9% processing reliability and reducing manual intervention by 40%.
- Utilized Jira and Agile methodologies to track project deliverables, resolve defects, and coordinate with cross-functional teams, contributing to 95% on-time project delivery.

Novartis - India

June 2021 – July 2023

Data Warehouse Engineer

- Conducted data analysis and profiling on enterprise datasets containing over 12M+ records, identifying data quality issues and improving data accuracy by 25% across reporting and operational systems.
- Collaborated with business stakeholders and data architects to gather requirements, define business rules, and support 10+ enterprise data integration projects from analysis through deployment.
- Developed and maintained 90+ Source-to-Target Mapping (STM) documents, ensuring accurate data transformations and reducing mapping discrepancies by 30%.
- Designed and implemented ETL workflows using Informatica PowerCenter, processing 3M+ records daily while maintaining 99.5% data load success rates.
- Created complex Teradata SQL queries, views, and stored procedures for data extraction, transformation, and reporting, improving query performance by 35%.
- Supported end-to-end SDLC activities, including intake, analysis, design, development, testing, deployment, and production support, contributing to 15+ successful project releases.
- Performed data validation, reconciliation, and quality assurance activities that reduced data inconsistencies by 27% and improved reporting reliability.
- Designed and enhanced data warehouse structures to support enterprise reporting and analytics, reducing report generation time by 40%.
- Worked closely with data governance teams to maintain metadata standards, business glossaries, and data lineage documentation, improving compliance readiness by 20%.
- Automated batch processing and monitoring activities using CA7 and Control-M scheduling tools, reducing manual effort by 35% and improving operational efficiency.
- Participated in Agile ceremonies using Jira, managing user stories, defect resolution, and sprint deliverables while achieving 95% sprint completion rates.
- Provided production support and root cause analysis for data-related issues, reducing incident resolution time by 30% and maintaining 99.8% data availability.

EDUCATION

Master's in Computer Science

Saint Leo University
